NAME

BN CTX start, BN CTX get, BN CTX end - use temporary BIGNUM variables

SYNOPSIS

```
#include <openssl/bn.h>
void BN_CTX_start(BN_CTX *ctx);
BIGNUM *BN_CTX_get(BN_CTX *ctx);
void BN_CTX_end(BN_CTX *ctx);
```

DESCRIPTION

These functions are used to obtain temporary **BIGNUM** variables from a **BN_CTX** (which can been created by using **BN_CTX_new**(3)) in order to save the overhead of repeatedly creating and freeing **BIGNUM**s in functions that are called from inside a loop.

A function must call **BN_CTX_start()** first. Then, **BN_CTX_get()** may be called repeatedly to obtain temporary **BIGNUM**s. All **BN_CTX_get()** calls must be made before calling any other functions that use the **ctx** as an argument.

Finally, **BN_CTX_end()** must be called before returning from the function. If **ctx** is NULL, nothing is done. When **BN_CTX_end()** is called, the **BIGNUM** pointers obtained from **BN_CTX_get()** become invalid.

RETURN VALUES

BN_CTX_start() and BN_CTX_end() return no values.

BN_CTX_get() returns a pointer to the BIGNUM, or NULL on error. Once BN_CTX_get() has failed, the subsequent calls will return NULL as well, so it is sufficient to check the return value of the last BN_CTX_get() call. In case of an error, an error code is set, which can be obtained by ERR_get_error(3).
