

NAME

OCSP_response_status, OCSP_response_get1_basic, OCSP_response_create,
 OCSP_RESPONSE_free, OCSP_RESPID_set_by_name, OCSP_RESPID_set_by_key_ex,
 OCSP_RESPID_set_by_key, OCSP_RESPID_match_ex, OCSP_RESPID_match, OCSP_basic_sign,
 OCSP_basic_sign_ctx - OCSP response functions

SYNOPSIS

```
#include <openssl/ocsp.h>
```

```
int OCSP_response_status(OCSP_RESPONSE *resp);
OCSP_BASICRESP *OCSP_response_get1_basic(OCSP_RESPONSE *resp);
OCSP_RESPONSE *OCSP_response_create(int status, OCSP_BASICRESP *bs);
void OCSP_RESPONSE_free(OCSP_RESPONSE *resp);

int OCSP_RESPID_set_by_name(OCSP_RESPID *respid, X509 *cert);
int OCSP_RESPID_set_by_key_ex(OCSP_RESPID *respid, X509 *cert,
                             OSSL_LIB_CTX *libctx, const char *propq);
int OCSP_RESPID_set_by_key(OCSP_RESPID *respid, X509 *cert);
int OCSP_RESPID_match_ex(OCSP_RESPID *respid, X509 *cert, OSSL_LIB_CTX *libctx,
                         const char *propq);
int OCSP_RESPID_match(OCSP_RESPID *respid, X509 *cert);

int OCSP_basic_sign(OCSP_BASICRESP *brsp, X509 *signer, EVP_PKEY *key,
                   const EVP_MD *dgst, STACK_OF(X509) *certs,
                   unsigned long flags);
int OCSP_basic_sign_ctx(OCSP_BASICRESP *brsp, X509 *signer, EVP_MD_CTX *ctx,
                       STACK_OF(X509) *certs, unsigned long flags);
```

DESCRIPTION

OCSP_response_status() returns the OCSP response status of *resp*. It returns one of the values:
OCSP_RESPONSE_STATUS_SUCCESSFUL,
OCSP_RESPONSE_STATUS_MALFORMEDREQUEST,
OCSP_RESPONSE_STATUS_INTERNALERROR, *OCSP_RESPONSE_STATUS_TRYLATER*
OCSP_RESPONSE_STATUS_SIGREQUIRED, or
OCSP_RESPONSE_STATUS_UNAUTHORIZED.

OCSP_response_get1_basic() decodes and returns the *OCSP_BASICRESP* structure contained in *resp*.

OCSP_response_create() creates and returns an *OCSP_RESPONSE* structure for *status* and optionally including basic response *bs*.

OCSP_RESPONSE_free() frees up OCSP response *resp*.

OCSP_RESPID_set_by_name() sets the name of the OCSP_RESPID to be the same as the subject name in the supplied X509 certificate *cert* for the OCSP responder.

OCSP_RESPID_set_by_key_ex() sets the key of the OCSP_RESPID to be the same as the key in the supplied X509 certificate *cert* for the OCSP responder. The key is stored as a SHA1 hash. To calculate the hash the SHA1 algorithm is fetched using the library ctx *libctx* and the property query string *propq* (see "ALGORITHM FETCHING" in **crypto(7)** for further information).

OCSP_RESPID_set_by_key() does the same as **OCSP_RESPID_set_by_key_ex()** except that the default library context is used with an empty property query string.

Note that an OCSP_RESPID can only have one of the name, or the key set. Calling

OCSP_RESPID_set_by_name() or **OCSP_RESPID_set_by_key()** will clear any existing setting.

OCSP_RESPID_match_ex() tests whether the OCSP_RESPID given in *respid* matches with the X509 certificate *cert* based on the SHA1 hash. To calculate the hash the SHA1 algorithm is fetched using the library ctx *libctx* and the property query string *propq* (see "ALGORITHM FETCHING" in **crypto(7)** for further information).

OCSP_RESPID_match() does the same as **OCSP_RESPID_match_ex()** except that the default library context is used with an empty property query string.

OCSP_basic_sign() signs OCSP response *brsp* using certificate *signer*, private key *key*, digest *dgst* and additional certificates *certs*. If the *flags* option **OCSP_NOCERTS** is set then no certificates will be included in the response. If the *flags* option **OCSP_RESPID_KEY** is set then the responder is identified by key ID rather than by name. **OCSP_basic_sign_ctx()** also signs OCSP response *brsp* but uses the parameters contained in digest context *ctx*.

RETURN VALUES

OCSP_RESPONSE_status() returns a status value.

OCSP_response_get1_basic() returns an **OCSP_BASICRESP** structure pointer or **NULL** if an error occurred.

OCSP_response_create() returns an **OCSP_RESPONSE** structure pointer or **NULL** if an error occurred.

OCSP_RESPONSE_free() does not return a value.

OCSP_RESPID_set_by_name(), **OCSP_RESPID_set_by_key()**, **OCSP_basic_sign()**, and **OCSP_basic_sign_ctx()** return 1 on success or 0 on failure.

OCSP_RESPID_match() returns 1 if the OCSP_RESPID and the X509 certificate match or 0 otherwise.

NOTES

OCSP_response_get1_basic() is only called if the status of a response is *OCSP_RESPONSE_STATUS_SUCCESSFUL*.

HISTORY

The **OCSP_RESPID_set_by_name()**, **OCSP_RESPID_set_by_key()** and **OCSP_RESPID_match()** functions were added in OpenSSL 1.1.0a.

The **OCSP_basic_sign_ctx()** function was added in OpenSSL 1.1.1.
