NAME

SPI_cursor_fetch - fetch some rows from a cursor

SYNOPSIS

void SPI_cursor_fetch(Portal *portal*, bool *forward*, long *count*)

DESCRIPTION

SPI_cursor_fetch fetches some rows from a cursor. This is equivalent to a subset of the SQL command **FETCH** (see **SPI_scroll_cursor_fetch** for more functionality).

ARGUMENTS

Portal *portal*
    portal containing the cursor

bool *forward*
    true for fetch forward, false for fetch backward

long *count*
    maximum number of rows to fetch

RETURN VALUE

SPI_processed and *SPI_tuptable* are set as in **SPI_execute** if successful.

NOTES

Fetching backward may fail if the cursor's plan was not created with the CURSOR_OPT_SCROLL option.
