

NAME

`SSL_SESSION_get0_ticket`, `SSL_SESSION_has_ticket`, `SSL_SESSION_get_ticket_lifetime_hint` - get details about the ticket associated with a session

SYNOPSIS

```
#include <openssl/ssl.h>
```

```
int SSL_SESSION_has_ticket(const SSL_SESSION *s);
unsigned long SSL_SESSION_get_ticket_lifetime_hint(const SSL_SESSION *s);
void SSL_SESSION_get0_ticket(const SSL_SESSION *s, const unsigned char **tick,
                           size_t *len);
```

DESCRIPTION

`SSL_SESSION_has_ticket()` returns 1 if there is a Session Ticket associated with this session, and 0 otherwise.

`SSL_SESSION_get_ticket_lifetime_hint` returns the lifetime hint in seconds associated with the session ticket.

`SSL_SESSION_get0_ticket` obtains a pointer to the ticket associated with a session. The length of the ticket is written to `*len`. If `tick` is non NULL then a pointer to the ticket is written to `*tick`. The pointer is only valid while the connection is in use. The session (and hence the ticket pointer) may also become invalid as a result of a call to `SSL_CTX_flush_sessions()`.

RETURN VALUES

`SSL_SESSION_has_ticket()` returns 1 if session ticket exists or 0 otherwise.

`SSL_SESSION_get_ticket_lifetime_hint()` returns the number of seconds.

SEE ALSO

HISTORY

The `SSL_SESSION_has_ticket()`, `SSL_SESSION_get_ticket_lifetime_hint()` and `SSL_SESSION_get0_ticket()` functions were added in OpenSSL 1.1.0.
