NAME

TIFFScanlineSize, TIFFRasterScanlineSize, - return the size of various items associated with an open TIFF file

SYNOPSIS

#include <tiffio.h>

tsize_t TIFFRasterScanlineSize(TIFF **tif***)**
tsize_t TIFFScanlineSize(TIFF **tif***)**

DESCRIPTION

TIFFScanlineSize returns the size in bytes of a row of data as it would be returned in a call to *TIFFReadScanline*, or as it would be expected in a call to *TIFFWriteScanline*.

TIFFRasterScanlineSize returns the size in bytes of a complete decoded and packed raster scanline. Note that this value may be different from the value returned by *TIFFScanlineSize* if data is stored as separate planes.

DIAGNOSTICS

None.
