

NAME

XSynchronize, XSetAfterFunction - enable or disable synchronization

SYNTAX

```
int (*XSynchronize(Display *display, Bool onoff))();
```

```
int (*XSetAfterFunction(Display *display, int (*procedure)())());
```

ARGUMENTS

display Specifies the connection to the X server.

procedure Specifies the procedure to be called.

onoff Specifies a Boolean value that indicates whether to enable or disable synchronization.

DESCRIPTION

The **XSynchronize** function returns the previous after function. If *onoff* is **True**, **XSynchronize** turns on synchronous behavior. If *onoff* is **False**, **XSynchronize** turns off synchronous behavior.

The specified procedure is called with only a display pointer. **XSetAfterFunction** returns the previous after function.
