

NAME

XkbComputeRowBounds - Update the bounding box of a row

SYNOPSIS

Bool XkbComputeRowBounds (XkbGeometryPtr *geom*, XkbSectionPtr *section*, XkbRowPtr *row*);

ARGUMENTS

geom

geometry that contains the section

section

section that contains the row

row

row to be examined and updated

DESCRIPTION

XkbComputeRowBounds checks the bounds of all keys in the *row* and updates the bounding box of the row if necessary. *XkbComputeRowBounds* returns False if any of the arguments is NULL; otherwise, it returns True.
