

NAME

XkbFreeGeomOutlines - Free geometry outlines

SYNOPSIS

```
void XkbFreeGeomOutlines (XkbShapePtr shape, int first, int count, Bool free_all);
```

ARGUMENTS

shape

shape in which outlines should be freed

first

first outline to be freed

count

number of outlines to be freed

free_all

True => all outlines are freed

DESCRIPTION

If *free_all* is True, all outlines are freed regardless of the value of *first* or *count*. Otherwise, *count* outlines are freed beginning with the one specified by *first*.
