

NAME

XtGetApplicationNameAndClass - retrieve application name and class

SYNTAX

```
#include <X11/Intrinsic.h>
```

```
void XtGetApplicationNameAndClass(Display* display, String* name_return, String* class_return);
```

ARGUMENTS

display Specifies an open display connection that has been initialized with **XtDisplayInitialize**.

name_return Returns the application name.

class_return Returns the application class.

DESCRIPTION

XtGetApplicationNameAndClass returns the application name and class passed to **XtDisplayInitialize** for the specified display. If the display was never initialized or has been closed, the result is undefined. The returned strings are owned by the Ininsics and must not be modified or freed by the caller.
