NAME

XtGetSelectionParameters - retrieve target parameters for a selection request with a single target

SYNTAX

#include <X11/Intrinsic.h>

void XtGetSelectionParameters(Widget *owner*, Atom *selection*, XtRequestId *request_id*, Atom
type_return, XtPointer *value_return*, unsigned long *length_return*, int *format_return*);

ARGUMENTS

owner　　　　Specifies the widget that owns the specified selection.

selection　　　Specifies the selection being processed.

request_id　　Specifies the requestor id in the case of incremental selections, or NULL in the case of
atomic transfers.

type_return　　Specifies a pointer to an atom in which the property type of the parameters will be
stored.

value_return　Specifies a pointer into which a pointer to the parameters are to be stored. A NULL
will be stored if no parameters accompany the request.

length_return　Specifies a pointer into which the number of data elements in *value_return* of size
indicated by *format_return* will be stored.

format_return　Specifies a pointer into which the size in bits of the parameter data in the elements of
value_return will be stored.

DESCRIPTION

XtGetSelectionParameters may only be called from within an **XtConvertSelectionProc** or from within
the last call to an **XtConvertSelectionIncrProc** with a new request_id.
