

NAME

XtTranslateCoords - translate widget coordinates

SYNTAX

```
#include <X11/Intrinsic.h>
```

```
void XtTranslateCoords(Widget w, Position x, Position y, Position *rootx_return, Position  
*rooty_return);
```

ARGUMENTS

rootx_return

rooty_return Returns the root-relative x and y coordinates.

x

y Specify the widget-relative x and y coordinates.

w Specifies the widget.

DESCRIPTION

While **XtTranslateCoords** is similar to the Xlib **XTranslateCoordinates** function, it does not generate a server request because all the required information already is in the widget's data structures.
