

NAME

ACCERCISER - an interactive accessibility explorer.

SYNOPSIS

accerciser [--version] [--help]

DESCRIPTION

This manual page documents briefly **accerciser**.

accerciser is an interactive Python accessibility explorer for the GNOME desktop. It uses AT-SPI to inspect and control widgets, allowing you to check if an application is providing correct information to assistive technologies and automated test frameworks. Accerciser has a simple plug-in framework which you can use to create custom views of accessibility information.

OPTIONS

--version Print the version number.

-, --help

Show summary of options.

CONFIGURATION

metacity configuration can be found under *Preferences->Windows* and *Preferences->Keyboard Shortcuts* on the menu-panel. Advanced configuration can be achieved directly through gconf editing (gconf-editor or gconftool-2).

SEE ALSO

Comprehensive **accerciser** documentation could be found under the Help menu in **accerciser**.
