

NAME

`curl_multi_strerror` - return string describing error code

SYNOPSIS

```
#include <curl/curl.h>
```

```
const char *curl_multi_strerror(CURLMcode errnum);
```

DESCRIPTION

This function returns a string describing the *CURLMcode* error code passed in the argument *errnum*.

EXAMPLE

```
int main(void)
{
    int still_running;
    CURLM *multi = curl_multi_init();

    CURLMcode mc = curl_multi_perform(multi, &still_running);
    if(mc)
        printf("error: %s\n", curl_multi_strerror(mc));
}
```

AVAILABILITY

This function was added in libcurl 7.12.0

RETURN VALUE

A pointer to a null-terminated string.
