## **NAME**

dga - test program for the XFree86-DGA extension

## **SYNOPSIS**

dga

## **DESCRIPTION**

Dga is a simple test client for the XFree86-DGA extension. It fills the screen with a different colour for each key pressed. It prints some basic framebuffer parameters, and also keyboard and pointer events to stdout. To exit, hit the 'q' key. Hitting the 'b' key runs a simple benchmark, measuring raw framebuffer write and read speed (this takes one second each).
