

NAME

`gnote` - A simple note-taking application for Gnome

SYNOPSIS

`gnote` [*OPTION*] ...

DESCRIPTION

This manual page documents briefly the **gnote** command.

Gnote is a desktop note-taking application for Linux and Unix. Simple and easy to use, but with potential to help you organize the ideas and information you deal with every day.

Gnote's usefulness lies in the ability to relate notes and ideas together, using a WikiWiki-like linking system.

When run without any options, either a Search All Notes window or the Gnote note menu appears in the notification tray area depending on configuration. Selecting a note from a list in Search All Notes or from the menu from notification area displays the note's spatial window.

Changes to notes are saved automatically. Links to URLs, files, and other notes are detected as you type. Rich editing such as highlighting, bold, italics, undo/redo, and variable font sizes are supported.

Global keybindings exist to allow fast access to Gnote notes and dialogs. These keybindings are set in GSettings (see below) and may be activated from any application.

OPTIONS

The program follows the usual GNU command line syntax, with options starting with two dashes ('--'). A summary of options are included below.

--background

Run Gnote in background.

--note-path PATH

Specify the path of the directory containing the notes.

--new-note

Create and display a new note.

--new-note TITLE

Create and display a new note with the title given.

--open-note TITLE/URL

Display the existing note matching TITLE or URL.

--search

Open the search all notes window with the search text.

--start-here

Display the "Start Here" note.

--highlight-search TEXT

Search and highlight TEXT in the opened note.

--help

Show summary of options.

--version

Show version of program.

GSETTINGS SETTINGS

Gnote has several preference settings stored in GSettings. Changes to Settings are applied instantly to any running Gnote instance. A summary of the GConf settings and their purpose are described below.

org.gnome.gnote.global-keybindings

A GSettings schema for key bindings. Keys are listed below.

open-start-here

Global X keybinding for displaying the "Start Here" note. The default keybinding is <Alt>F11.

show-note-menu

Global X keybinding for displaying the Gnote applet's note menu. The default keybinding is <Alt>F12.

create-new-note

Global X keybinding for creating and displaying a new note.

open-recent-changes

Global X keybinding for opening the recent changes dialog.

open-search

Global X keybinding for opening the note search dialog.
