

NAME

gnutls_crypto_register_mac - API function

SYNOPSIS

```
#include <gnutls/crypto.h>
```

```
int gnutls_crypto_register_mac(gnutls_mac_algorithm_t algorithm, int priority, gnutls_mac_init_func  
init, gnutls_mac_setkey_func setkey, gnutls_mac_setnonce_func setnonce, gnutls_mac_hash_func  
hash, gnutls_mac_output_func output, gnutls_mac_deinit_func deinit, gnutls_mac_fast_func  
hash_fast);
```

ARGUMENTS

gnutls_mac_algorithm_t *algorithm*

is the gnutls MAC identifier

int *priority* is the priority of the algorithm

gnutls_mac_init_func *init*

A function which initializes the MAC

gnutls_mac_setkey_func *setkey*

A function which sets the key of the MAC

gnutls_mac_setnonce_func *setnonce*

A function which sets the nonce for the mac (may be **NULL** for common MAC algorithms)

gnutls_mac_hash_func *hash*

Perform the hash operation

gnutls_mac_output_func *output*

Provide the output of the MAC

gnutls_mac_deinit_func *deinit*

A function which deinitializes the MAC

gnutls_mac_fast_func *hash_fast*

Perform the MAC operation in one go

DESCRIPTION

This function will register a MAC algorithm to be used by gnutls. Any algorithm registered will override the included algorithms and by convention kernel implemented algorithms have priority of 90 and CPU-assisted of 80. The algorithm with the lowest priority will be used by gnutls.

DEPRECATED

since 3.7.0 it is no longer possible to override cipher implementation

RETURNS

GNUTLS_E_SUCCESS on success, otherwise a negative error code.

SINCE

3.4.0

REPORTING BUGS

Report bugs to <bugs@gnutls.org>.
