NAME

gnutls_hkdf_expand - API function

SYNOPSIS

#include <gnutls/crypto.h>

int gnutls_hkdf_expand(gnutls_mac_algorithm_t *mac***, const gnutls_datum_t *** *key***, const gnutls_datum_t *** *info***, void *** *output***, size_t** *length***);**

ARGUMENTS

gnutls_mac_algorithm_t mac
> the mac algorithm used internally

const gnutls_datum_t * key
> the pseudorandom key created with HKDF-Extract

const gnutls_datum_t * info
> the optional informational data

void * output   the output value of the expand operation

size_t length   the desired length of the output key

DESCRIPTION

This function will derive a variable length keying material from the pseudorandom key using the HKDF-Expand function as defined in RFC 5869.

RETURNS

Zero or a negative error code on error.

SINCE

3.6.13
