

NAME

gnutls_privkey_import_ecc_raw - API function

SYNOPSIS

```
#include <gnutls/abstract.h>
```

```
int gnutls_privkey_import_ecc_raw(gnutls_privkey_t key, gnutls_ecc_curve_t curve, const
gnutls_datum_t * x, const gnutls_datum_t * y, const gnutls_datum_t * k);
```

ARGUMENTS

gnutls_privkey_t key

The key

gnutls_ecc_curve_t curve

holds the curve

const gnutls_datum_t * x

holds the x-coordinate

const gnutls_datum_t * y

holds the y-coordinate

const gnutls_datum_t * k

holds the k (private key)

DESCRIPTION

This function will convert the given elliptic curve parameters to the native **gnutls_privkey_t** format. The output will be stored in *key*.

In EdDSA curves the *y* parameter should be **NULL** and the *x* and *k* parameters must be in the native format for the curve.

RETURNS

On success, **GNUTLS_E_SUCCESS** (0) is returned, otherwise a negative error value.

SINCE

3.0

REPORTING BUGS

Report bugs to <bugs@gnutls.org>.
