const void * session_data

is a pointer to space to hold the session.

DESCRIPTION

Sets all session parameters, in order to resume a previously established session. The session data given must be the one returned by **gnutls_session_get_data**(). This function should be called before **gnutls_handshake**().

Keep in mind that session resuming is advisory. The server may choose not to resume the session, thus a full handshake will be performed.

RETURNS

On success, **GNUTLS_E_SUCCESS** (0) is returned, otherwise an error code is returned.
