

NAME

gnutls_x509_cert_get_issuer_alt_name2 - API function

SYNOPSIS

```
#include <gnutls/x509.h>
```

```
int gnutls_x509_cert_get_issuer_alt_name2(gnutls_x509_cert_t cert, unsigned int seq, void * ian, size_t * ian_size, unsigned int * ian_type, unsigned int * critical);
```

ARGUMENTS

gnutls_x509_cert_t cert

should contain a **gnutls_x509_cert_t** type

unsigned int seq

specifies the sequence number of the alt name (0 for the first one, 1 for the second etc.)

void * ian is the place where the alternative name will be copied to

size_t * ian_size

holds the size of ret.

unsigned int * ian_type

holds the type of the alternative name (one of **gnutls_x509_subject_alt_name_t**).

unsigned int * critical

will be non-zero if the extension is marked as critical (may be null)

DESCRIPTION

This function will return the alternative names, contained in the given certificate. It is the same as **gnutls_x509_cert_get_issuer_alt_name()** except for the fact that it will return the type of the alternative name in *ian_type* even if the function fails for some reason (i.e. the buffer provided is not enough).

RETURNS

the alternative issuer name type on success, one of the enumerated **gnutls_x509_subject_alt_name_t**. It will return **GNUTLS_E_SHORT_MEMORY_BUFFER** if *ian_size* is not large enough to hold the value. In that case *ian_size* will be updated with the required size. If the certificate does not have an Alternative name with the specified sequence number then **GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE** is returned.

SINCE

2.10.0
