NAME
gnutls_x509_crt_get_issuer_alt_name2 - API function

SYNOPSIS
#include <gnutls/x509.h>

int gnutls_x509_crt_get_issuer_alt_name2(gnutls_x509_crt_t *cert***, unsigned int** *seq***, void *** *ian***, size_t *** *ian_size***, unsigned int *** *ian_type***, unsigned int *** *critical***);**

ARGUMENTS
gnutls_x509_crt_t cert
> should contain a **gnutls_x509_crt_t** type

unsigned int seq
> specifies the sequence number of the alt name (0 for the first one, 1 for the second etc.)

void * ian   is the place where the alternative name will be copied to

size_t * ian_size
> holds the size of ret.

unsigned int * ian_type
> holds the type of the alternative name (one of gnutls_x509_subject_alt_name_t).

unsigned int * critical
> will be non-zero if the extension is marked as critical (may be null)

DESCRIPTION
This function will return the alternative names, contained in the given certificate. It is the same as **gnutls_x509_crt_get_issuer_alt_name**() except for the fact that it will return the type of the alternative name in *ian_type* even if the function fails for some reason (i.e. the buffer provided is not enough).

RETURNS
the alternative issuer name type on success, one of the enumerated **gnutls_x509_subject_alt_name_t**. It will return **GNUTLS_E_SHORT_MEMORY_BUFFER** if *ian_size* is not large enough to hold the value. In that case *ian_size* will be updated with the required size. If the certificate does not have an Alternative name with the specified sequence number then **GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE** is returned.

SINCE

2.10.0
