

NAME

gnutls_x509_cert_get_issuer_alt_othername_oid - API function

SYNOPSIS

```
#include <gnutls/x509.h>
```

```
int gnutls_x509_cert_get_issuer_alt_othername_oid(gnutls_x509_cert_t cert, unsigned int seq, void * ret,
size_t * ret_size);
```

ARGUMENTS

gnutls_x509_cert_t cert

should contain a **gnutls_x509_cert_t** type

unsigned int seq

specifies the sequence number of the alt name (0 for the first one, 1 for the second etc.)

void * ret

is the place where the otherName OID will be copied to

size_t * ret_size

holds the size of ret.

DESCRIPTION

This function will extract the type OID of an otherName Subject Alternative Name, contained in the given certificate, and return the type as an enumerated element.

If *oid* is null then only the size will be filled. The *oid* returned will be null terminated, although *oid_size* will not account for the trailing null.

This function is only useful if **gnutls_x509_cert_get_issuer_alt_name()** returned **GNUTLS_SAN_OTHERNAME**.

RETURNS

the alternative issuer name type on success, one of the enumerated gnutls_x509_subject_alt_name_t.

For supported OIDs, it will return one of the virtual (GNUTLS_SAN_OTHERNAME_*) types, e.g.

GNUTLS_SAN_OTHERNAME_XMPP, and **GNUTLS_SAN_OTHERNAME** for unknown OIDs. It will return **GNUTLS_E_SHORT_MEMORY_BUFFER** if

ret_size is not large enough to hold the value. In that case

ret_size will be updated with the required size. If the certificate does not have an Alternative name with the specified sequence number and with the otherName type then

GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE is returned.

SINCE

2.10.0
