NAME

ident - identify RCS keyword string in files

SYNOPSIS

ident [**-q**] [**-V**] [*file* ...]

DESCRIPTION

The **ident** utility searches for all instances of the pattern '$keyword: text$' in *files*.

If no arguments are passed, then **ident** parses the standard input.

keyword must only be composed of alphanumeric values in the C locale, followed by ':' and a space.

These options are supported:

-q   Quiet mode: suppress warnings if no pattern found.

-V   Do nothing, added for compatibility with GNU ident.

EXIT STATUS

The **ident** utility exits 0 on success, and >0 if an error occurs.

AUTHORS

This version of the **ident** utility was written by Baptiste Daroussin <*bapt@FreeBSD.org*>.
