

**NAME****ilogb**, **ilogbf**, **ilogbl**, **logb**, **logbf**, **logbl** - extract exponent**LIBRARY**

Math Library (libm, -lm)

**SYNOPSIS**

#include &lt;math.h&gt;

*int***ilogb**(*double* *x*);*int***ilogbf**(*float* *x*);*int***ilogbl**(*long double* *x*);*double***logb**(*double* *x*);*float***logbf**(*float* *x*);*long double***logbl**(*long double* *x*);**DESCRIPTION**

**ilogb()**, **ilogbf()** and **ilogbl()** return *x*'s exponent in integer format. **ilogb**(*+infinity*) returns INT\_MAX, **ilogb**(*+NaN*) returns FP\_ILOGBNAN, and **ilogb**(0) returns FP\_ILOGB0.

**logb**(*x*), **logbf**(*x*), and **logbl**(*x*) return *x*'s exponent in floating-point format with the same precision as *x*. **logb**(*+infinity*) returns +infinity, and **logb**(0) returns -infinity with a division by zero exception.

**SEE ALSO**

**STANDARDS**

The **ilogb()**, **ilogbf()**, **ilogbl()**, **logb()**, **logbf()**, and **logbl()** routines conform to ISO/IEC 9899:1999 ("ISO C99"). The latter three implement the logb function recommended by IEEE Std 754-1985.

## HISTORY

*Function First Appeared In*

<b>logb()</b>	4.3BSD
<b>ilogb()</b>	FreeBSD 1.1.5
<b>ilogbf()</b>	FreeBSD 2.0
<b>logbf()</b>	FreeBSD 2.0
<b>ilogbl()</b>	FreeBSD 5.4
<b>logbl()</b>	FreeBSD 8.0
