NAME

ippevepcl/ps - pcl and postscript print commands for ippeveprinter

SYNOPSIS

ippevepcl [*filename*]
ippeveps [*filename*]

DESCRIPTION

ippevepcl and **ippeveps** are print commands for **ippeveprinter**(1). As with all print commands, these commands read either the filename specified on the command-line or from the standard input. Output is sent to the standard output. Status and progress messages are sent to the standard error.

ippevepcl prints to B&W HP PCL laser printers and supports printing of HP PCL (application/vnd.hp-pcl), PWG Raster (image/pwg-raster), and Apple Raster (image/urf) print files.

ippeveps print to Adobe PostScript printers and supports printing of PDF (application/pdf), PostScript (application/postscript), JPEG (image/jpeg), PWG Raster (image/pwg-raster), and Apple Raster (image/urf) print files. Printer-specific commands are read from a supplied PPD file. If no PPD file is specified, generic commands suitable for any Level 2 or Level 3 PostScript printer are used instead to specify duplex printing and media size.

EXIT STATUS

These programs return 1 on error and 0 on success.

ENVIRONMENT

These program inherit the environment provided by the **ippeveprinter** program.
