

**NAME**

**javavms** - the Java VM wrapper configuration file.

**DESCRIPTION**

The **javavms** file contains a list of the registered Java VMs which are available to be used by **javavm**. Each Java VM is listed by specifying the location of the main "java" executable on a line.

The **javavms** file may also contains comments. Comments must start with the '#' character, and can be both lines by themselves or the trailing portion of a line containing a registered Java VM.

**FILES**

*/usr/local/etc/javavms*

The location of the Java VM wrapper configuration file.
