

NAME

kinfo_getproc - function for getting process information from kernel

LIBRARY

System Utilities Library (libutil, -lutil)

SYNOPSIS

```
#include <sys/types.h>
```

```
#include <sys/user.h>
```

```
#include <libutil.h>
```

```
struct kinfo_proc *
```

```
kinfo_getproc(pid_t pid);
```

DESCRIPTION

This function is used for obtaining process information from the kernel.

The *pid* field contains the process identifier. This should be a process that you have privilege to access. This function is a wrapper around `sysctl(3)` with the `KERN_PROC_PID` mib. While the kernel returns a packed structure, this function expands the data into a fixed record format.

RETURN VALUES

On success the `kinfo_getproc()` function returns a pointer to a `struct kinfo_proc` structure as defined by `<sys/user.h>`. The pointer was obtained by an internal call to `malloc(3)` and must be freed by the caller with a call to `free(3)`. On failure the `kinfo_getproc()` function returns `NULL`.

SEE ALSO

`free(3)`, `malloc(3)`, `sysctl(3)`

HISTORY

The `kinfo_getproc()` function first appeared in FreeBSD 7.0.
