

NAME

libssh2_sftp_last_error - return the last SFTP-specific error code

SYNOPSIS

```
#include <libssh2.h>
```

```
#include <libssh2_sftp.h>
```

unsigned long

```
libssh2_sftp_last_error(LIBSSH2_SFTP *sftp);
```

DESCRIPTION

sftp - SFTP instance as returned by **libssh2_sftp_init(3)**

Returns the last error code produced by the SFTP layer. Note that this only returns a sensible error code if libssh2 returned LIBSSH2_ERROR_SFTP_PROTOCOL in a previous call. Using

libssh2_sftp_last_error(3) without a preceding SFTP protocol error, it will return an unspecified value.

RETURN VALUE

Current error code state of the SFTP instance.
