

Name

mariadb_dyncol_column_cmp_named - Compare two column names

Synopsis

```
#include <mariadb_dyncol.h>

int mariadb_dyncol_column_cmp_named(const MYSQL_LEX_STRING *s1,
                                    const MYSQL_LEX_STRING *s2);
```

Description

Compares two dynamic column keys represented as a pointer to a MYSQL_LEX_STRING structure.

Parameter

- ⊕ s1 - First key
- ⊕ s2 - Second key

Return value

Returns an integer less than, equal to, or greater than zero if the first bytes of s1 is found, respectively, to be less than, to match, or be greater than the first bytes of s2.
