Name

mysql_error - returns the last error message for the most recent function call

Synopsis

#include <mysql.h>

const char * mysql_error(MYSQL * mysql);

Description

Returns the last error message for the most recent function call that can succeed or fail. An empty string means no error occurred.

Parameter

⊕ mysql is a connection identifier, which was previously allocated by **mysql_init(3)** and connected by **mysql_real_connect(3)**.

Notes

⊕ Client error codes are listed in errmsg.h header file, server error codes are listed in mysqld_error.h header file of the server source distribution.

⊕ Client error messages can be obtained by calling **mariadb_get_infov(3)** and passing the parameter MARIADB_CLIENT_ERRORS
