Name

    mysql_field_tell - Returns offset of the field cursor

Synopsis

    #include <mysql.h>

    MYSQL_FIELD_OFFSET mysql_field_tell(MYSQL_RES * result);

Description

    Return the offset of the field cursor used for the last **mysql_fetch_field(3)** call. This value can be used as a parameter for the function **mysql_field_seek(3)**.

Parameter

    ⊕ result - a result set identifier returned by **mysql_store_result(3)** or **mysql_use_result(3)**.

Return value

    Returns the current offset of the field cursor
