

Name

mysql_get_socket - Returns the descriptor of the socket used for the current connection

Synopsis

```
#include <mysql.h>
```

```
my_socket mysql_get_socket(MYSQL * mysql);
```

Description

Returns the descriptor of the socket used for the current connection.

Parameter

⊕ mysql - a mysql handle, which was previously allocated by **mysql_init(3)** and connected by **mysql_real_connect(3)**.

Return value

A socket handle or INVALID_SOCKET (-1) if the socket descriptor could not be determined, e.g. if the connection doesn't use a socket connection.
