Name

mysql_stmt_sqlstate - Returns SQLSTATE error from previous statement operation.

Synopsis

#include <mysql.h>

const char * mysql_stmt_sqlstate(MYSQL_STMT * stmt);

Description

Returns a string containing the SQLSTATE error code for the most recently invoked prepared statement function that can succeed or fail. ## Parameter * stmt - a statement handle, which was previously allocated by **mysql_stmt_init(3)**. ## Return value Returns a 5 digit error code. '00000' means no error. The values are specified by ANSI SQL and ODBC.

Notes

Please note that not all client library error codes are mapped to SQLSTATE errors. Errors which can't be mapped will returned as value HY000.
