

NAME

ne_ssl_cert_cmp, ne_ssl_cert_free - functions to operate on certificate objects

SYNOPSIS

```
#include <ne_header.h>
```

```
int ne_ssl_cert_cmp(const ne_ssl_certificate *c1, const ne_ssl_certificate *c2);
```

```
void ne_ssl_cert_free(ne_ssl_certificate *cert);
```

DESCRIPTION

The **ne_ssl_cert_cmp** function can be used to compare two certificate objects; it returns zero if they refer to the same certificate, and non-zero otherwise.

The **ne_ssl_cert_free** function can be used to destroy a certificate object when it is no longer needed.
