NAME

    ovpn - OpenVPN DCO driver

SYNOPSIS

    To compile this driver into the kernel, place the following lines in your kernel configuration file:

        device ovpn

    Alternatively, to load the driver as a module at boot time, place the following line in loader.conf(5):

        if_ovpn_load="YES"

DESCRIPTION

    The **ovpn** device driver provides support for OpenVPN DCO. DCO, or Data Channel Offload, moves the OpenVPN data path into the kernel. This can improve performance.

    The **ovpn** interface is created automatically by the OpenVPN daemon. It requires no configuration other than that done by OpenVPN.
