

**NAME**

PCRE2 - Perl-compatible regular expressions (revised API)

**SYNOPSIS**

```
#include <pcre2.h>
```

```
void pcre2_compile_context_free(pcre2_compile_context *ccontext);
```

**DESCRIPTION**

This function frees the memory occupied by a compile context, using the memory freeing function from the general context with which it was created, or **free()** if that was not set. If the argument is **NULL**, the function returns immediately without doing anything.

There is a complete description of the PCRE2 native API in the **pcre2api** page and a description of the POSIX API in the **pcre2posix** page.
