NAME

PCRE2 - Perl-compatible regular expressions (revised API)

SYNOPSIS

#include <pcre2.h>

void pcre2_substring_free(PCRE2_UCHAR **buffer***);**

DESCRIPTION

This is a convenience function for freeing the memory obtained by a previous call to
pcre2_substring_get_byname() or **pcre2_substring_get_bynumber()**. Its only argument is a pointer to
the string. If the argument is NULL, the function does nothing.

There is a complete description of the PCRE2 native API in the **pcre2api** page and a description of the
POSIX API in the **pcre2posix** page.
