

NAME

`rdma_get_dst_port` - Returns the remote port number of a bound `rdma_cm_id`.

SYNOPSIS

```
#include <rdma/rdma_cma.h>
```

```
uint16_t rdma_get_dst_port (struct rdma_cm_id *id);
```

ARGUMENTS

`id` RDMA identifier.

DESCRIPTION

Returns the remote port number for an `rdma_cm_id` that has been bound to a remote address.

RETURN VALUE

Returns the 16-bit port identifier associated with the peer endpoint. If the `rdma_cm_id` is not connected, the returned value is 0.
