

NAME

rdma_get_peer_addr - Returns the remote IP address of a bound rdma_cm_id.

SYNOPSIS

```
#include <rdma/rdma_cma.h>
```

```
struct sockaddr * rdma_get_peer_addr (struct rdma_cm_id *id);
```

ARGUMENTS

id RDMA identifier.

DESCRIPTION

Returns the remote IP address associated with an rdma_cm_id.

RETURN VALUE

Returns a pointer to the sockaddr address of the connected peer. If the rdma_cm_id is not connected, the contents of the sockaddr structure will be set to all zeroes.
