

NAME

router - XML packet distributor

SYNOPSIS

router [-h] [-c *config*] [-D]

DESCRIPTION

router is the core component of the jabberd system. It passes XML packets between the components, and manages the entry and exit of components onto the network.

OPTIONS

- h Show summary of options.
- c Alternate configuration file to use. The compiled-in default is /usr/local/etc/jabberd/router.xml.
- D Print debugging output. You should configure jabberd with the --enable-debug switch to enable this.
