NAME

sade - sysadmins disk editor

SYNOPSIS

sade

DESCRIPTION

The **sade** utility is used for various disk administration tasks on FreeBSD systems.

It is generally invoked without arguments for the default behavior, where the main menu is presented.

NOTES

The **sade** utility aims to provide a handy tool for disk management tasks on an already installed system. The goal is to provide the same text interface for disk management in bsdinstall(8) in the post-installation environment.

SEE ALSO

bsdinstall(8), gpart(8)

HISTORY

A program called **sade** first appeared in FreeBSD 6.3 as a utility encapsulating features from the sysinstall(8) installer. It was replaced in FreeBSD 10.0 with the equivalent part of bsdinstall(8).

AUTHORS

Nathan Whitehorn <*nwhitehorn@FreeBSD.org*>

BUGS

The utility misses a lot of nice features, such as tools for manipulating gmirror(8). These will be added later.
