NAME

sm - Jabber IM session manager

SYNOPSIS

sm *[-h] [-c config] [-D]*

DESCRIPTION

sm provides instant messaging services to Jabber clients. It performs all the essential instant messaging services like rosters, presence tracking, message distribution and subscriptions, plus more advanced features.

OPTIONS

-h Show summary of options.

-c Alternate configuration file to use. The compiled-in default is /usr/local/etc/jabberd/sm.xml.

-D Print debugging output. You should configure jabberd with the --enable-debug switch to enable this.

SEE ALSO
