

NAME

tvtohz - convert time interval to tick count

SYNOPSIS

```
#include <sys/time.h>
```

int

```
tvtohz(struct timeval *tv);
```

DESCRIPTION

The **tvtohz()** function accepts a single argument *tv* which specifies the time interval over which to calculate the number of system ticks that would elapse.

RETURN VALUES

Returns the integral number of system ticks expected to elapse in the given interval, including the current tick.

SEE ALSO

callout(9), microtime(9), microuptime(9)

HISTORY

The **tvtohz** function first appeared in FreeBSD 3.0
