

NAME

`unw_destroy_addr_space` -- destroy unwind address space

SYNOPSIS

```
#include <libunwind.h>
```

```
void unw_destroy_addr_space(unw_addr_space_t as);
```

DESCRIPTION

The `unw_destroy_addr_space()` routine destroys the address space specified by argument `as` and thereby releases all associated resources (such as memory).

Applications must not destroy the local address space `unw_local_addr_space`. Attempting to do so results in undefined behavior (e.g., the application may crash).

SEE ALSO

`libunwind(3)`, `unw_create_addr_space(3)`
