NAME
    xcb_ungrab_key - release a key combination

SYNOPSIS
    #include <xcb/xproto.h>

 Request function
    xcb_void_cookie_t **xcb_ungrab_key**(xcb_connection_t *conn*, xcb_keycode_t *key*,
        xcb_window_t *grab_window*, uint16_t *modifiers*);

REQUEST ARGUMENTS
    conn   The XCB connection to X11.

    key   The keycode of the specified key combination.

                      Using the special value *XCB_GRAB_ANY* means releasing all possible key codes.

    grab_window   The window on which the grabbed key combination will be released.

    modifiers   The modifiers of the specified key combination.

                      Using the special value *XCB_MOD_MASK_ANY* means releasing the key
                      combination with every possible modifier combination.

DESCRIPTION
    Releases the key combination on *grab_window* if you grabbed it using *xcb_grab_key* before.

RETURN VALUE
    Returns an *xcb_void_cookie_t*. Errors (if any) have to be handled in the event loop.

    If you want to handle errors directly with *xcb_request_check* instead, use *xcb_ungrab_key_checked*.
    See **xcb-requests(3)** for details.

ERRORS
    xcb_value_error_t
                    TODO: reasons?

    xcb_window_error_t
                    The specified *grab_window* does not exist.
