

NAME

xcb_unmap_notify_event_t - a window is unmapped

SYNOPSIS

```
#include <xcb/xproto.h>
```

Event datastructure

```
typedef struct xcb_unmap_notify_event_t {
    uint8_t  response_type;
    uint8_t  pad0;
    uint16_t sequence;
    xcb_window_t event;
    xcb_window_t window;
    uint8_t  from_configure;
    uint8_t  pad1[3];
} xcb_unmap_notify_event_t;
```

EVENT FIELDS

response_type The type of this event, in this case *XCB_UNMAP_NOTIFY*. This field is also present in the *xcb_generic_event_t* and can be used to tell events apart from each other.

sequence The sequence number of the last request processed by the X11 server.

event The reconfigured window or its parent, depending on whether *StructureNotify* or *SubstructureNotify* was selected.

window The window that was unmapped.

from_configure Set to 1 if the event was generated as a result of a resizing of the window's parent when *window* had a *win_gravity* of *UnmapGravity*.
