NAME

xo_error - generate simple error messages in multiple output styles

LIBRARY

Text, XML, JSON, and HTML Output Emission Library (libxo, -lxo)

SYNOPSIS

#include <libxo/xo.h>

void
xo_error(*const char *fmt*, *...*);

DESCRIPTION

Use the **xo_error**() function to generate error messages to standard error. The *fmt* argument is a string containing printf-style formatting instructions that describe the remaining arguments.

When converting an application to **libxo**, one can replace *fprintf(stderr,...)* calls with **xo_error**() calls.

SEE ALSO

printf(3), xo_emit(3), libxo(3)

HISTORY

The **libxo** library first appeared in FreeBSD 11.0.

AUTHORS

libxo was written by Phil Shafer *<phil@freebsd.org>*.
