

NAME

xo_finish, **xo_finish_h** - finish formatting output

LIBRARY

Text, XML, JSON, and HTML Output Emission Library (libxo, -lxo)

SYNOPSIS

```
#include <libxo/xo.h>
```

```
xo_ssize_t
```

```
xo_finish(void);
```

```
xo_ssize_t
```

```
xo_finish_h(xo_handle_t *xop);
```

DESCRIPTION

When the program is ready to exit or close a handle, a call to **xo_finish**() is required. This flushes any buffered data, closes open **libxo** constructs, and completes any pending operations.

Calling this function is *vital* to the proper operation of libxo, especially for the non-TEXT output styles.

SEE ALSO

xo_emit(3), libxo(3)

HISTORY

The **libxo** library first appeared in FreeBSD 11.0.

AUTHORS

libxo was written by Phil Shafer <phil@freebsd.org>.
