

**NAME**

**yppoll** - ask version of NIS map from NIS server

**SYNOPSIS**

**yppoll** [-d *domain*] [-h *host*] *mapname*

**DESCRIPTION**

**yppoll** asks a NIS server process for the order number and which host is the master server for *mapname*.

The options are as follows:

**-d** *domain*

Use the NIS domain *domain* instead of the default domain as returned by `domainname(1)`.

**-h** *host* Ask the NIS server process running on *host* for information about *mapname*. If *host* is not specified, the server polled is the default server returned by `ypwhich(1)`.

**SEE ALSO**

`domainname(1)`, `ypcat(1)`, `ypmatch(1)`, `ypwhich(1)`, `yp(8)`, `ypbind(8)`, `ypset(8)`
