

NAME

zpool-destroy - destroy ZFS storage pool

SYNOPSIS

zpool destroy [-f] *pool*

DESCRIPTION

Destroys the given pool, freeing up any devices for other use. This command tries to unmount any active datasets before destroying the pool.

-f Forcefully unmount all active datasets.

EXAMPLES

Example 1: Destroying a ZFS Storage Pool

The following command destroys the pool *tank* and any datasets contained within:

```
# zpool destroy -f tank
```
